

## **Will Mycroleum work in my boat?**

Yes, it certainly will! When it's time to get the boat out of storage and you're getting it ready to have some fun...think performance and protection.... Think Mycroleum! Our engine treatment will help you find better performance from your engine and add a layer of protection you haven't had before. It will clean your engine, removing the sludge and varnish that collects over time. Our nanoparticles form a protective layer wherever heat and pressure are present and improve the engine's performance by reducing the friction that causes heat and wear. Adding Mycroleum Fuel Treatment will clean the injectors and your fuel system, improve the octane, get rid of the water that collects during storage, and reduce your exhaust emissions. We haven't forgotten the outdrive. Adding our patent pending Mycroleum Gear Oil Treatment increases the life of your outdrive (both upper and lower units) with the patent pending nanoparticles that will add a layer of protection and improve the performance and life of your drive train. Our EP2 grease contains our patent pending formula as well and can be used to lubricate all the zerk fittings as part of your regular maintenance. This product also gives you an extra layer of protection in your trailer wheel bearings (use it to lube your trailer hitch as well). And for general lubrication we have Mycroleum Lubricating/Penetrating Spray. Take care of those annoying squeaks!
